

Srinibas Das

Bhubaneswar, India | srinibasdas107@gmail.com | 078469 97262 | linkedin.com/in/srinibasdas | github.com/SSRINIBASS

SUMMARY

Backend and platform-oriented software engineer who builds real-time streaming systems and API-first backends. Designs deterministic, production-ready services with clear correctness guarantees. Strong in distributed systems, backend architecture, and algorithmic problem-solving, with experience deploying systems on the cloud.

EDUCATION

Veer Surendra Sai University of Technology – Burla, India

Sept 2023 – present

BTech in Computer Science

- GPA: 8.20/10.0
- Participated in ICPC Amritapuri prelims 2025 and secured an AIR 1186 out of 2930
- Finalist in HackNITR 2026

EXPERIENCE

CTTC – Bhubaneswar, India

June 2025 – July 2025

Summer Intern

- Developed a computer vision application achieving 95% detection accuracy in diverse lighting conditions through efficient grayscale preprocessing and Haar Cascade classifiers

Enigma Web and Coding Club – Burla, India

Aug 2025 – present

Coordinator

- Spearheaded the Organizing Committee for the Smart India Hackathon 2025 Grand Finale (Nodal Center)
- Managed logistics and operations for 120+ finalists across 20 teams during the high-pressure 36-hour event

PROJECTS

URLite – Microservices URL Shortener

Nov 2025 – Dec 2025

- Architected using Docker, Redis, Nginx, React, Node.js, and AWS
- Reduced database read operations by ~90% by implementing a Redis Write-Through Cache to serve active links from memory
- Secured production traffic using Cloudflare Zero Trust Tunnels and Docker Compose orchestration, eliminating public port exposure
- Available at shortener.dsrinibas.space

Crypto Narrative Pulse Tracker

Jan 2026 – Jan 2026

- Engineered with Python, FastAPI, Pathway, Docker, and WebSockets
- Developed a real-time analytics system processing 1,000+ social messages per minute with sub-5s latency
- Generated a 1–10 momentum score and delivered live trading alerts via REST APIs and WebSockets

GitDocify

Feb 2026 – Apr 2026

- Implemented using Python, OpenCV, and NumPy
- Designed an API-first platform to analyze undocumented GitHub repositories at scale
- Indexed up to 10K files and 50K code chunks and delivered hallucination-safe answers with 100% code citations

SKILLS

Languages: C++, Python, SQL, JavaScript, Bash, Shell

AI and Machine Learning: Transformers, TensorFlow, Keras, OpenCV, Scikit-learn

Cloud and Infrastructure: EC2, Docker, Redis, Nginx, Linux, WSL, Cloudflare Zero Trust

Backend and Web: FastAPI, Node.js, React.js, Django, MCP, Git, GitHub
