

AI-Powered Recruiter Application

Requirements Document

1. Objective

Build a full-stack web application to manage candidate profiles, analyze resumes using AI, and match candidates with job descriptions.

2. Functional Requirements

- Resume Upload: Support PDF and DOCX file upload and extract text.
- Candidate Management: Store and view candidate data.
- Job Description Management: Create and view job descriptions.
- Candidate-JD Matching: Generate match score and fit analysis.
- AI Processing: Analyze resume and extract structured information.

3. Technical Requirements

- Backend: Python (FastAPI / Flask / Django) with REST APIs.
- Frontend: Next.js for user interface.
- Database: Relational database to store all records.

4. Data Entities

Candidates, Job Descriptions, AI Analysis, Match Records.

5. Output

- Candidate data storage.
- Resume analysis results.
- Candidate-JD match score and fit analysis.

6. Scope

End-to-end flow from resume upload to candidate-job matching using AI.
